

## VasoDrive-AP<sup>®</sup>

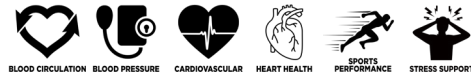

**The perfect way to start a workout! A casein-based milk protein enzyme that helps maintain healthy blood pressure levels and clinically proven to optimize arterial elasticity and health**

- Found to greatly enhance arterial elasticity, allowing for improved circulation and healthier blood pressure levels, especially during periods of exercise.
- Produced through a patented fermentation and enzymatic process that releases two key tripeptides, Valyl-Prolyl-Proline (VPP) and Isoleucyl-Prolyl-Proline (IPP) that are not practical to receive through dairy products
- Maintaining healthy blood pressure levels also support deep sleep, weight management, and normal response to insulin.

### STATUS

### FUNCTIONS

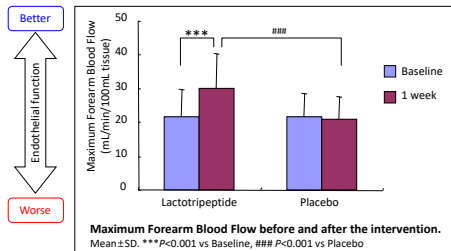

## Clinically researched benefits include:

- Maintaining systolic and diastolic blood pressure levels already within a normal range
- Promotes arterial elasticity
- Increased bioavailability of VPP and IPP compared to dairy products
- Inhibits an enzyme to promote the construction of blood vessels
- Found to be safe with no adverse effects in multiple human clinical studies

### Lactotripeptide improves endothelial function - forearm blood flow

**Subjects:** Stage 1 hypertension (SBP:140-159/DBP:90-99), aged 40-65 (n=24)  
**Sample:** Capsule containing Lactotripeptide (VPP 3.4mg, IPP 3.9mg/day) /Placebo  
**Treatment:** 1 week
